

## architecture

## Creation of AGENT and sending query "what is public speaking"

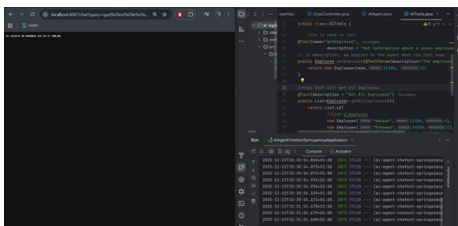

agents have functionalities that they can use, send emails, access DB ...

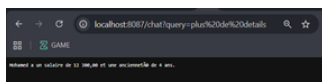

MCP (model context protocol) gives agents access to tools remotely -tools are in MCP SERVERS

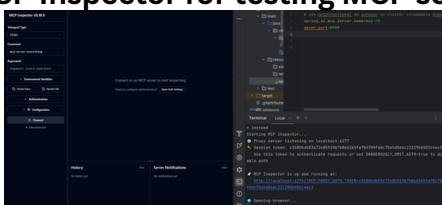

quel est le salaire de mohamed?

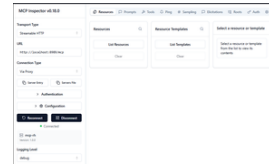

it has a memory and can recall the conversation

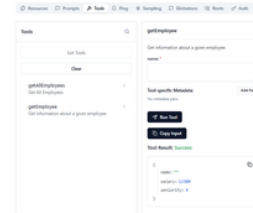

## MCP Inspector for testing MCP servers

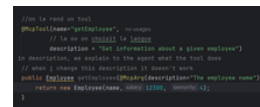

## Connected

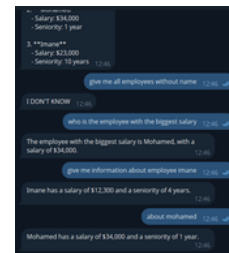

## Tools

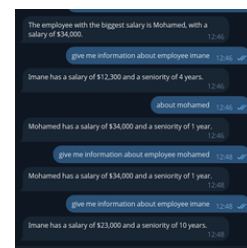

why second parameter doesn't work

why wasn't it working at first, and now it gives all the correct information (at first it used tool (get employee) and gave standard information

it mixes between using tool get employee and the chat history ...

made him forget history and asked him again

send action of typing :)
